

## Introduction/Business Problem

Frankfurt located in the state of Hesse in West Germany is the financial capital of Germany. In this project I am comparing Frankfurt with the financial capital of the USA, New York City. My aim is to understand how similar or different the activities around these locations are.

## Data

I would be using the data available on the internet to get a list of neighborhoods in Frankfurt. Further I would use Foursquare to extract the data on activities. For the New York data, I would be leveraging the data made available to us in the Applied Data Science Capstone course and also the Foursquare data.
